

Our customers place a special emphasis on high-quality consulting services and rely on having qualified consultants in their projects. Certification as a „Certified Professional for Requirements Engineering“ is not only increasingly requested by our customers but in some cases is now a prerequisite for a deployment of our consultants in their projects.

Thus the certification plays an integral part in the evaluation of our consulting expertise by the customer. Not only does it create an appropriate basis of trust for our services, it also provides us with a demonstrable proof of the ability of our employees to effectively support customers in their projects.

The CPRE certification ensures a common understanding of concepts and methods in the field of "Requirements Engineering ". This simplifies communication and enables effective collaboration. The contents of the certification form an essential knowledge base on which our consultants can build in the development of new approaches and innovative consulting concepts.

In addition to soft skills and methodology training the CPRE certification represents an important component in the individual development of our employees.

MID GmbH

MID is one of the leading independent providers of modeling tools in Europe. MID's open modeling platform, Innovator, provides an integrated model-based solution – from business process, requirements and data modeling, right through to object-oriented and technical software development.

With its fully-developed server technology, Innovator enables distributed teams to work together and supports international open standards, such as BPMN, UML and SysML, as well as SoaML for model-based SOA. The fact that Innovator can be easily customized means that it also supports domain-specific languages (DSL).

Innovator can be easily integrated with other tools, which enables each customer to tailor their tool landscape to suit their individual needs.
